UNIVERSITY MENTOURI CONSTANTINE :
OPENING ON THE SOCIO-ECONOMIC ENVIRONMENT

November 2009

Preface

This document proposes to bring a lighting on one of the fundamental shutters of the mission that the University Mentouri Constantine fixed, since the installation of the new educational system LMD.

It is a question of illustrating the opening of our university on its socio-economic environment.

Therefore, the socio-economic environment, the step of the opening and its corollary, the formations suggested by the University Mentouri Constantine will be presented in turn.

Another part of this document will present the relations of the University with its environment through privileged spaces such as the University Forum–Undertaken, the Umc-ANSEJ Partnership, the House of Entrepreneuriat, conventions of partnership and training course.

Summary

I.	Constantine and its economic environment	3

VI.	The Partnership UMC - ANSEJ	12
VII.	The House of Entrepreneuriat	14
VIII.	Conventions of Partnership	14
IX.	Training courses of the Students	15

I. Constantine and its economic environment

Constantine is particularly distinguished as being the Metropolis of the Algerian East. Considering its geographical and historical positioning, it represents a significant center of administrative, commercial, cultural and industrial activities.

Industry

There is an appreciable number of service companies and industrial companies. These last are primarily concentrated on:

➤ *Mechanical engineering industry*

Five significant national companies activate in this sector:

- L'ENMTP (material of lifting, earthwork),
- GERMAN (handling, lifting trucks),
- L'ENPMO (machine tools),
- CMT (agricultural machinery)
- And the National Company of the Industrial Vehicles (SNVI).

➤ *Pharmaceutical industry*

In addition to PHARMAL, the subsidiary company of national company SAIDAL, specialized in the production of insulin, there exists more than ten private companies activating in this sector (Isopharm, Zedpharm, LDM.....)

➤ *Food Agro industry*

This industry is mainly made up of the flour mills and semolina factories depending on the ERIAD company, the transformation and manufacturing units of the dairy products and derived, the pasta manufacturing units and a whole of SME providing various foodstuffs.

➤ *The industry of building materials*

The existence of a significant number of careers in the area and the intense activity of the sector of the building developed this sector. Among the most known companies, one can name:

- Company of Cements Hamma Bouziane Subsidiary
- National Aggregate company
- Ibn Ziad Ceramics and Squares company
- The East Company of the Derived Products
- Briquetterie Didouche Mourad

Agriculture

The area of Constantine corresponds overall to an area of which the agricultural vocation is made up mainly of field crops, with a priority granted to the practice of the strategic cultures such as:

- The cereals (durum wheat, common wheat, oats, barley),
- Fodder crops,
- Market gardenings,
- Arboriculture,
- Dry vegetables.

Considered as a pilot Wilaya in the production of cereals, Constantine produced more than 1,3 million quintals of cereals for the season 2008-2009. It positions thus, with Sétif and Mila, among the most powerful wilayas as regards cultivation of cereals. It has been just awarded by the Ministry for Agriculture and the Rural Development to be a leader on a national scale for the organization and management of the cereal campaign 2008/2009

The livestock production constitutes, for its part, a significant network of activities which is in constant evolution. These activities turn mainly around:

- The ovine breeding
- The bovine breeding
- Bee-keeping
- Poultry farming

Tourism Culture and craft industry

The thousand-year-old history and the single topography of the city confer on Constantine great tourist potentialities. One can quote:

➤ Archeological sites

- Dolmens,
- The Mausoleum of Massinissa: This mausoleum is allotted to the Numide King Massinissa who made of Cirta the richest city and which was not long in becoming the Numide capital in year 202 before J.C.
- Roman ruins of Tiddis: it is a city which knew the Roman conquest, but its Berbere noun lets think that it existed quite before them.
- Roman arcades vestiges of aqueduct.

➤ **Architectural Monuments**

The Casbah, the Palace of the Bey, the large Emir Abdelkader mosque, the University Mentouri, the Medersa, El Katania, the Cirta museum, the Regional Theatre of Constantine, the War memorial are as many monuments which testify to the history and the architectural richness of Constantine

➤ **Sites of the gorges of Rhummel**

Built in altitude on a single site overhanging the gorge of Rhummel, the city is also known under the name of the "city of the bridges". Among the most important sites, one can cite:

- The bridge of El-Kantara which is the oldest of the city; built in 1792 on the ruins of a Roman bridge, It was rebuilt in 1860.
- Most impressive of the bridges: the Sidi-M' Cid bridge called also "the hanging bridge"
- One of the highest stone bridges of the world: the Sidi-Rached bridge.
- The Footbridge MELLAH SLIMANE
- The bridge of the falls,
- The Boulevard of the Abyss, panorama on the valley of Hamma.

➤ **Craft industry**

In the field of artistic and cultural creation, Constantine is proud of being a headlight city in Algeria forming with Algiers and Tlemcen, one of the three schools of Andalusian music. Moreover,

Constantine and its area gather a great number of artisanal activities of all kinds: jewels, embroidery, dinandery, work of wood, pottery, etc.

➤ **Forests**

A significant surface of the wilaya is covered with forests: Djebel El Ouahch, Chettaba, El M' ridj, Draa Naga.

Each one of these sites contains various and varied species (pine, pine of Alep, eucalyptus, oak, oak liège.....) and represents a very rich ecological milieu, which makes it possible to develop several tourist activities.

Others

The area should also know a new dynamics with the reception of the great projects, infrastructures and equipment of the wilaya launched within the framework of the plan of support for the economic revival (Tramway, East-West highway, modernization of the railway, new university town, new air terminal for the international airport...) which with their reception, will constitute a true springboard with the local development. .

II. The UMC and its step of opening on its economic environment

The University Mentouri Constantine, in a step of improvement of the quality of the trainings and taking account of the evolution of knowledge and the requirements of the labour market, engaged in a process of a lasting bringing together between the university and the world of work.

The total objective of these actions is the implementation of an effective partnership between the academics and the world of work so that, on the one hand, the academics are held informed of the needs expressed by the various actors for the economic sector and that, on the other hand, the companies can profit from the results of the work undertaken in the research laboratories in order to ensure their valorization.

They also aim at improving the quality of the university training and the development of university vocational trainings.

It is in this direction that it undertook a certain number of actions One will quote in particular:

- The installation of a service in charge of the relations with the socio-economic sector,
- The periodic organization of the Forum University-enterprises whose third edition is scheduled for December 2009,
- The organization of symposium on economic subjects of

topicality; as:

- that devoted to the use and the creation of companies, organized in April 2008
- and with the construction of the East-West motorway organized in February 2009 and thanks to which the students could inform themselves on the extent and the requirements in term of employment for the project.

III. The UMC and Scientific Research

The university Mentouri Constantine counts 83 research laboratories gathering nearly 1450 teacher-researchers divided out of 10 faculties. The topics developed in these laboratories are approximately 30 projects controlled by the two National's agencies of Academic Development (ANDRU) Research and Research in Health(ANDRS) and nearly 430 research projects controlled by the national Commission of Evaluation and Futurology of the Academic Research project (CNEPRU).

The development of research with the UMC required the installation of certain actions in particular:

- The development of the activities of research and the stimulation of the utilization of the results of research,
- The equipment of the laboratories with necessary material to the implementation of the research programs,
- The creation of the scientific poles of excellence where the activities of the most powerful laboratories in terms of results and competences will be domiciled,
- The creation of a regional center of physico-chemical analysis,
- The reflexion on the creation of a technopole gathering on the same site university research and industry.
- The university research undertaken within the UMC is the source of a scientific production in constant progression in number and quality. What remains is to develop the means and the actions which will allow the economic valorization of the results of this research.

IV. Professionnalisation of the Formations at the UMC

The new organization of the formations was implemented at the University Mentouri Constantine, during the academic year 2004-2005. A particular interest was devoted to the installation of vocational university trainings: 7 professional licences were thus implemented. They relate primarily to the fields of data processing and economic sciences and management.

A continuous effort was and remains deployed to prospect the new trades and the trends in the labour market. Thus formations, more in adequacy with the needs for the labour market and in connection with the unit of the fields and the sectors with strong potential for employability, are proposed to the students. With the academic year 2009, the number of offers of vocational training suggested to the students is of 13 offers in Master and 37 offers in licence.

Open professional formations in 2009-2010

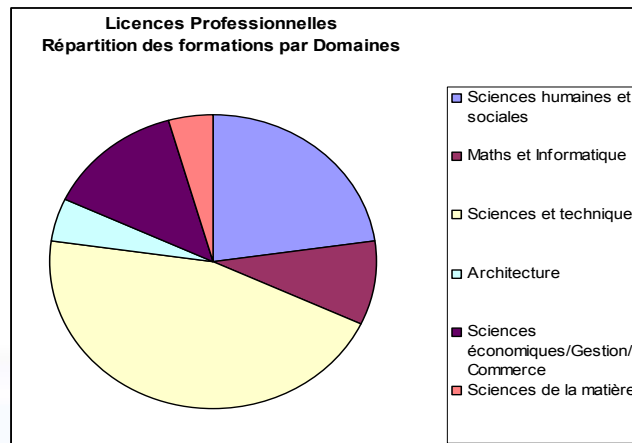

Masters

	Formation	Field
1.	Information systems and WEB technology	Math and Data processing
2.	Communication and information systems and technologies	Math and Data processing
3.	Management of the projects	Eco.Sciences/ Management/Trade
4.	Marketing	Eco Sciences. / Management/Trade
5.	Bank and insurance	Eco.Sciences/ Management/Trade
6.	To that the Accountant and financial	Eco.Sciences/Manag ement/Trade
7.	Hygiene and inspection of the meats and fish	Nature and Life Sciences
8.	Qualitative methodology applied to the diagnosis	Nature and Life Sciences
9.	Notarial Law	Law
10.	Town planning and the regional planning Law	Law
11.	Applied Statistics	Math and Data processing
12.	School Psychology	Social sciences
13.	Clinic psychology	Social sciences

Licences

	Formation	Field	student s
1.	Historical inheritance and Cultural Tourism	Social sciences	60
2.	Small animal breedings	Nature and Life Sciences	60
3.	Pharmaceutical Chemistry	Sciences of the matter	43
4.	Genius of the Processes	Sciences and technology	29
5.	Banks and Insurances	Economic sciences / Management/Commerce	172
6.	Marketing and commercial techniques	Economic sciences / Management/Commerce	30
7.	Human stock management	Economic sciences / Management/Commerce	45
8.	Networks and telecommunications	Sciences and technology	29
9.	Control and Energy management	Sciences and technology	29
10.	Multitechnique maintenance	Sciences and technology	26
11.	Processes of treatment of the electric power	Sciences and technology	40
12.	Industrial Energy systems	Sciences and technology	13
13.	Industrial Production	Sciences and technology	15
14.	Engineering in Car	Sciences and technology	20
15.	Operational control of the Projects	Architecture	39
16.	Control of the Projects out of Buildings	Sciences and technology	108
17.	Heating and air conditioning	Sciences and technology	11
18.	Engineering of transport	Sciences and technology	15
19.	Communication and information systems and technologies	Math and Data processing	38
20.	Information systems and WEB technology	Math and Data processing	31
21.	School psychology	Social sciences	29
22.	Clinic psychology	Social sciences	140
23.	Sociology of health	Social sciences	20
24.	Development of human resources	Social sciences	20

The number of offers being more significant for the Licence level, we present in what follows a distribution of the offers by field and according to the number of students

V. Le Forum University - Companies

The periodic organization of the Forum University-Companies belongs to the process of lasting relation with the world of work in which the university engaged since 2006. It was organized twice and the third edition is scheduled for December 2009

The two preceding editions saw the participation of a great number of public and private companies of the East region of the country, the Chamber of Commerce of Constantine and the Club of the Contractors and Private Investors of the Large Constantinois which gathers the majority of the private companies of the area. These meetings gave the opportunity to the whole participants to express their prospects and constituted true moments of exchanges on the needs, the stakes and the prospects as regards professionalisation for the formations. They also made it possible to approach significant topics as the form to be given to the partnership, the students training courses in the companies, and the needs for the companies in continuous formation ...

Concrete actions of partnership were concluded. One will quote as an example,

- The installation of training offers worked out jointly, in particular in the sector of mechanics, the networks and telecommunications, and management.
- The signature of a training convention and reception of students by the companies.

The third forum is scheduled for December 2009. It will be organized jointly with the direction in charge of promotion with Small and Medium-sized Company (SME) and of the Craft industry at the level of the wilaya of Constantine. It will be devoted to the technological innovation and its promotion within SME. The participation of a significant number of SME of the area is awaited.

Communications in workshops referring itself to the innovation in the sectors where the industrial activity in the area is most dominating, namely pharmaceutical and chemical industry, the agro-alimentary industry and the industry of building materials, will make it possible to determine even more the needs for SME, in terms of innovation.

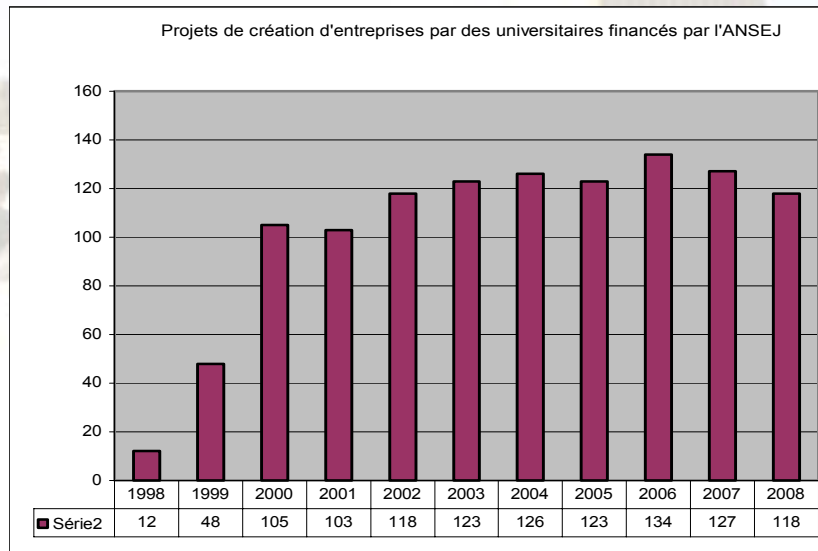

Exposures and presentations of the activities of various participating companies with the university public are also envisaged. They will be used to highlight a better knowledge of the needs and prospects of the ones and others.

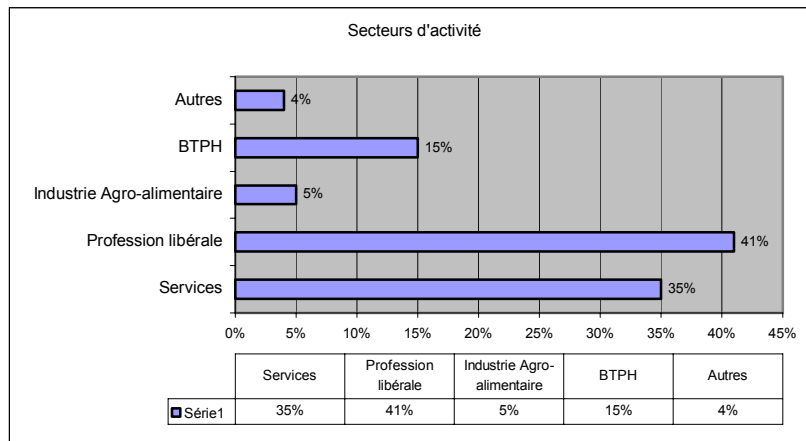

VI. The partnership UMC-ANSEJ

The National Agency of Support for the Employment of Young people (ANSEJ), is an organization which ensures the financing and the accompaniment of microentreprises created by young promoters. The privileged and strong relations maintained since a long time between the ANSEJ and MENTOURI University led to:

- the launching of the first licence in the entrepreneuriat speciality at the level of the Algerian territory,
- the installation of the house of the entrepreneuriat, having to be used as a tool of accompaniment with this licence,
- the installation of relay to device ANSEJ at the level of the university, in order to promote and popularize the entrepreneurial spirit in the students milieu, and to then encourage them with the creation of companies.

Moreover, the number of academics who create their company at the end of their formation is in constant increase. The following graph represents the evolution of the number of projects of creation of companies presented by academics and financed by the ANSEJ (ANSEJ source) as well as the branches of industry concerned.

Convinced of the dominating role of the university elite in socio-economic web of the country, the UMC and the ANSEJ of Constantine worked to distinguish this category by a set of actions among which the launching of actions of proximity and approach, materialized by “Monday of the micro-company”, during which the ANSEJ occupied the university hemicycle by organizing symposium for the students of all the faculties. The repetition and the permanence of these actions allowed the evolution of the relations between the two organizations, and the ANSEJ became a partner of choice for the university and vice versa. This also allowed the consultation and the exchange of experiment and information for various questions relating to the creation of companies and the accompaniment of the carriers of projects, included in the program of the summer school which is organized annually since 2001, at the level of the university of Constantine, for an average of 60 students at the end of their training.

The ANSEJ also contributed to the starting of the licence in Entrepreneuriat at the university of Constantine, with the enrollement of 11 students after common trunk, the ANSEJ having in charge 03 modules of this course which are:

- Steps of creation of companies,
- Organizations and tools of assistance to the creation of companies,
- Plan of business taught,
- In addition to the practical training course of the students (120 hours), among which 40 hours in immersion in the seedbed of the micro-companies, in order to allowing the students to perfect their teaching within a real and organized framework.

VII. The house of Entrepreneuriat

The realisation of the House of Entrepreneuriat was possible thanks to the partnership Mentouri University – ANSEJ and the University of Grenoble, within the framework of a Tempus program between the University Pierre MENDES FRANCE (UPMF) and Mentouri University Constantine.

Set up within the Faculty of Economic Sciences, the house of the entrepreneuriat is intended to promote the spirit of undertaking with students and to federate the teaching means to inculcate the “know how” and the “know to be” in terms of creation and management. To this end, days of study and seminars are organized all along the year, in addition to the days of sensitizing the students of various faculties to the creation of companies.

The House of Entrepreneuriat includes a cell of the ANSEJ whose mission is to bring more information on the devices envisaged by the state for the assistance to the creation of companies. This realization which is the first of its kind in Algeria,

VIII. Conventions of partnership

The relation of University Mentouri Constantine with its economic environment socio is not summarized only with the organization of specific demonstrations, goal it is carried out throughout the academic year by the concretization of agreements of partnership with companies and organizations r. Among the whole of the reached agreements these last years, we can quote those established with:

- The National Company of the Materials of Public works (ENMTP) which is most powerful of the companies concerned with the mechanical engineering industry which is strongly established in the area of Constantine. A close cooperation is maintained with this company. It was concretized by the design and the installation of a formation professionnalisante in mechanics on the industrial production.
- Pharmaceutical Group SAIDAL. The dialogues and the exchanges are regular with this partner concerning all that milked with the formation and research in the field of pharmaceutical industry.
- The operator Algeria Telecom. This exemplary collaboration concretizes in various ways. There is initially the installation of a formation professionnalisante in Networks and Telecommunications which is strongly appraisal by the students, since it meets a real need for the labour market. Then, the catch of load by this company of a great number of students for the realization of their training course and that in several specialities.

- The University of Constantine is among the 5 Algerian university establishments (with the University of Algiers, the University of Sciences and Technology of Bab Ezzouar (USTHB), the Polytechnic School of Algiers, the National Institute of Trade (Inc) of Algiers, and the Institute of Technology and Telecommunications of Oran (ITTO)) which were retained by the mobile operator of telephony, Orascom Télécom Algeria to sign conventions of partnership whose principal objective is to offer to the students the possibilities of a practical levelling and deserving student to be accomodated with the company to carry out their practical training courses and if required to be recruited in
- A convention of partnership will be signed between the University Mentouri Constantine and the Management of SME of the wilaya of Constantine on the one hand, and the University Mentouri Constantine and SME activating in various sectors, on the other hand, at the time of the forum university –enterprises which will take place in December 2009.

IX. Training courses of the Students

The training course is another form of the relation which the university maintains with its partners of the economic world. It is integrated more and more in the courses of the lesson of the various university formations and the number of the structures which accomodate the students is increasingly high.

As an example, we give, in what follows, the distribution by faculty of the students having carried out a training course during the year 2008-2009 as well as an exhaustive list of the partners with whom the UMC signed conventions of training course for students during the same year.

Department	Faculty	Nber of students
Architecture	Sciences of the ground, the geography and the regional planning	39
Sciences of the ground	Sciences of the ground, the geography and the regional planning	109
Management	Economic sciences and sciences of management	40
Finance	Economic sciences and sciences of management	82
